

Conversation with mom about my world on Viber

Saba Kha: My mind world

I was thinking of a place I could live in calmly outside of any discomfort to calm myself after a hard day

And ONLY after a hard day

And I thought of living in the world that I drew on a black board a while ago

Complete darkness, when looking up if you didn't look at anything else beside you

You'd think you were going to fall into the infinite sky of darkness if your feet weren't on the ground

It actually happens to me in real life in the rare instances where my whole view is taken up by the sky

Trees with no leaves but with white orbs floating on top of them

Some small enough to keep in a pot in your room

Some bigger than some skyscrapers

One of which would be big enough to have its orb
look like a moon in the sky

In one part of the world it'll be completely dark
with ONLY the blue light of the grass feeling the
pressure of your steps would light up

While in the other half the orb would keep it lit
enough for you to see and keep all the other trees
fed with light because its roots can actually reach
the centre of the planet therefore not needing any
other light to grow unlike its children that aren't
tall enough yet

The centre would have white plasma powering the
trees infinitely shrinking and regrowing

Sometimes Grim would keep me company

The tree chopper who'd use his scythe to cut trees
near the big ones to let them have space to grow

He could also enhance his size allowing him to
pluck out the few stars that could be born in the
sky making for an otherworldly nightly view until
he'd have to grab it and phase his hand into the
core of the planet on the empty side to refuel the
core

He would be the guardian of the world and the one who'd make the stars appear

I know this part is too science oriented but hear me out

Visual particles are particles that split into negative and positive until fusing back together and being erased from existence again

So I thought in my dimension a positive visual particle would appear that would lose its partner to a black hole

In my dimension the particle following new rules of physics would have enough energy to explode leaving a shape like a mix of space dust and galaxies until the colors would all become white after moving to the centre and becoming a white ball

Aka a star Grim would take

Sometimes it would look too far away to make for a brilliant night sky just leaving a bright dot with slight shift in colors

Sometimes it would be small but still visible

But sometimes it would be close enough to cover the entire sky

On the planet your memories would be eternal

You could feel, taste, think, imagine, hear and see the whole history of your existence in that dimension

Like if it was a video recording but feel every moment of it as if it was happening again

So you'd never forget what you used to be even billions of years into the future

And the most insane part of all would be if you could bring stuff there letting you live and learn and develop for eternity

Being able to keep your mind at a constant state of motivation in the world and creating until getting back home a better man never wasting a day of your life because the outside would still be paused

The limit of what I could bring would be the limit of what I could physically carry and the limit of complexity of life

If I wanted to bring a living being with nerves and brains the more complex brain they'd have the more difficult it would be to bring it there

Because since it's the place where I take a break or go all out on developing bringing a human person that can argue and fight and annoy and lie wouldn't be capable of getting in while someone like a Puppy that isn't as complex could be there to keep me company when Grim isn't around to keep me some level of sanity without making me lose my damn mind

The hardest part of life in that case would be living outside of that world

I would still be mortal and since time would stop outside every time I'd get in If I was at my final breaths as an old man I'd have to live inside of the world for eternity with the limited things I made and brought there

I would still never be able to see the future

How my family grew how they developed how they got worse how technology changed

With nobody else I'd have to learn how to feel happy all alone and when I would get that feeling It would be enough to let me live naturally for the rest of time there

If I could bring a human being there I think they'd be at the very least young enough to have childish innocence but old enough to be able to ask questions and learn and feel wonder

Even if they wouldn't quite understand deep things they could learn a lot and still keep their childish innocence

That way for all I know I could teach a child many things for many years and surprise people by how smart she or he has gotten

Because without a human I could talk to I feel like I would actually go insane in there

Maybe when I'd decide to stay in my world forever I could make it such that time in real life would go

on and leave a portal where I was supposed to die into my world where people could enter whoever they are

And I could bring them in or out by judging their mind

Stuff that would be destructive would automatically just be sent away because I wouldn't want any negativity or conflict there

So they could bring their stuff and live on the planet to live forever

And they could have the freedom of feeling their past emotions in that world and manipulating those feelings like I could to keep them sleepy for whenever they want or keep them motivated and positive all they want

But again these are just my thoughts just my imagination

The sad part is it'll never be real and I can only imagine it until death

That's the sad part of every imaginary world you want to be in

You're stuck in your mind as seconds pass by in the world where it can't be accomplished

Or can be accomplished if your imagination of a world you want to live in is way too real

Saba Kha: What do you think about the concept

Deda: I loved it Saba

Deda: and you do understand very well all pros and cons of that imaginary world

Deda: I would love to live in a world you described

Deda: and especially loved the memory part

Deda: When you can basically feel all the history and existence of the world

Saba Kha: I just felt like if I had that ability it would be simpler to remember the best parts while also remembering the bad

Therefore not forgetting the good parts of myself I shouldn't forget and happy or sad that I either beat or didn't get rid of the bad part of myself

Saba Kha: And it could feel enjoyable experiencing the past as it was

Saba Kha: Instead of looking at a screen the experience reduced to a video beyond the screen that you can't get into

Deda: Agree

Saba Kha: Also also I'd like to have more motivation and drive so manipulating my past feelings to keep myself perpetually feeling that way would be insanely good in my opinion

Saba Kha: Every day waking up just to get to doing what I like to do

Saba Kha: And immortality pretty much letting me leave an infinite legacy of change

Deda: Sure

Deda: Unfortunate part is what we know

Saba Kha: What do you mean

Deda: It is not possible at least with the science we have

Saba Kha: Makes sense

Deda: but nothing is impossible overall

7 PM Deda: If we recognize that space and time around us is infinite than theoretically anything can become true

Deda: I mean anything has a chance of becoming reality in an infinite time

Saba Kha: Including a possibility of me reliving my life again with my consciousness in this exact world just not remembering that I am

Saba Kha: For all I know this is an infinitth time I've said that

Deda: Exactly

Saba Kha: And an infinitth time I've relived this

Saba Kha: But at least I'll know what will happen in the future in the perspective of someone else... even if I won't actually know that I used to be myself

Saba Kha: And probably not care as much in return

Deda: What do you mean?

Saba Khazhomia: if the world is infinite it also means I could exist again consciously instead of not existing which also gives it a possibility of being born and grow up as someone just close enough to my life and family to know me and see the drawings and writings I've made

Saba Khazhomia: I won't be there because I'll be dead I won't even know I used to be me

Deda: Right

Saba Khazhomia: I feel like you're still confused

Deda: No

Deda: I got it

Deda: There is a religion budism and its major concept os reincarnation

Deda: It basically means that we return many times we just do not know about it

Saba Khazhomia: in infinity of space it COULD be possible but I think I should keep believing in the worst outcome no matter what

Deda: But the concept of how we return is different its not just human but can be a plant or animal or insect

Saba Khazhomia: being me being erased

Deda: This belief actually has its scientific proof

Deda: There is concept of “ atoms biogenic migration”

Deda: It means that we are all composed of atoms and these atoms migrate from human to plant from plant to animal and so on and so on

Saba Khazhomia: while I do think that's true atoms are different from the brain and its memories

Deda: And in infinite time there is a chance that the exact atoms which I am composed right now will end up coming together again

Deda: Yes

Deda: That is why even we return we just do not know about it

Deda: And this is a sad part of ot

Deda: The main thing we as a humans are afraid is that our consiousness will go to no existance

Saba Khazhomia: I think I've also heard of something similar of your previous point

Saba Khazhomia: poincare recurrence time

Saba Khazhomia: it's a mesurment of time of atoms reaccurring as they are now in a specific amount of time

Deda: Yes

Saba Khazhomia: for our universe it being so huge it doesn't even matter if it's seconds years or malennia

Deda: Exactly

Deda: Anyways we probably do not yet know all the truth of the reasons of our existance

Saba Khazhomia: nor how consciousness even works

Deda: And hopefully science will have answers to that one day

Saba Khazhomia: and if it can be copied or recreated

Deda: Yap

Deda: At least there is a try to create an artificial intelligence which technically can be immortal

Saba Khazhomia: I've been wondering for a while the paradox where if you could copy someone's consciousness how would anyone guess who was real and who wasn't and if the person having two consciousnesses at the same time would make them see in two disconnected different places at once

Deda: There are still these different theories around it

Deda: Like parallel worlds or mixed consciousness
Deda: Nothing really proved

Deda: But nothing excluded as well
